

**HARRIS ACADEMY PECKHAM**  
GCSE Geography | OCR B | Year 11

## **HUMAN FIELDWORK: RESULTS**

### **To what extent is traffic a problem in Whitstable?**

#### **Lesson 4: Presentation and analysis**

|                       |                                      |
|-----------------------|--------------------------------------|
| <b>Name</b>           |                                      |
| <b>Class</b>          |                                      |
| <b>Data collected</b> | Monday 28 September 2026, Whitstable |

*In silence. You have five minutes.*

|                                                                                                                                                                          |                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>(1)</p> <p>Why did we count traffic three times at each site instead of once? [2]</p> <p>Last Lesson</p>                                                              | <p>(2)</p> <p>In Lagos, what is the BRT and what problem was it built to solve? [2]</p> <p>Last Term</p>                                                                                     |
| <p>(3)</p> <p>(a) What does 'suburbanisation' mean? [1]<br/>(b) What is an 'economic hub'? [1]<br/>Both are real OCR questions from the 2025 paper.</p> <p>Last Year</p> | <p>(4)</p> <p>Three of our five groups only sampled the High Street. Explain how that affects the conclusion we can draw about Whitstable as a whole. [3]</p> <p>Stretch &amp; Challenge</p> |

|                                           |                 |
|-------------------------------------------|-----------------|
| <b>What Section B actually looks like</b> | <b>The exam</b> |
|-------------------------------------------|-----------------|

Section B is the last part of Paper 2. Everything today is practice for it.

**18 marks: 15 for the questions, 3 for spelling, punctuation and geography words.** That is about a quarter of Paper 2. Half of it is about YOUR fieldwork, half about someone else's that you have never seen.

### The five things they ask you

| What they ask                                  | Marks        | Whose fieldwork?      |
|------------------------------------------------|--------------|-----------------------|
| Improve a figure they give you                 | <b>2</b>     | UNFAMILIAR            |
| Read a value off a figure (multiple choice)    | <b>1</b>     | UNFAMILIAR            |
| Suggest a different technique, and why         | <b>2</b>     | UNFAMILIAR            |
| Justify ONE technique you used to PRESENT data | <b>2</b>     | <b>FAMILIAR</b>       |
| The big one, always marked with a star         | <b>8 + 3</b> | Either, it alternates |

**Three checkpoints today.** Three times you stop and do a real OCR question. Those pages say CHECKPOINT.

### Which of the five would you find hardest, and why?

---

---

---

---

| Section B alternates, year by year | The exam |
|------------------------------------|----------|
|------------------------------------|----------|

The 8-mark question swaps between FAMILIAR and UNFAMILIAR fieldwork. The short questions swap the opposite way, so both get covered every year.

| Year        | The 8-mark question                                  | The short questions                     |
|-------------|------------------------------------------------------|-----------------------------------------|
| <b>2022</b> | UNFAMILIAR: conclusion on London's congestion charge | None (short Covid paper)                |
| <b>2023</b> | FAMILIAR: was your data collection successful?       | Mostly unfamiliar. Familiar comes last. |
| <b>2024</b> | FAMILIAR: were your methods effective?               | Mostly unfamiliar. Familiar comes last. |
| <b>2025</b> | UNFAMILIAR: evaluate the students' techniques        | Familiar moves to the FRONT.            |

**One question comes up EVERY single year.**

Two marks, FAMILIAR, about ONE presentation technique. 2023 said describe it. 2024 said explain it. 2025 said justify it. Same question, three command words. You meet it at Checkpoint 1.

**So you must be ready for both.** If the 8-marker is UNFAMILIAR, a FAMILIAR question still appears near the start, worth 2 marks. You cannot revise for only one half.

**2026 is the next paper. Which do you predict, and why?**

*Look at the pattern in the table. There is no guaranteed answer, but there is a sensible bet.*

---

---

---

## 1. What you found in Whitstable

Stage 3

The two tables you need for the graphs are printed again next to each graph, so you never have to turn back.

### Traffic counts: totals

| Site             | Count 1 | Count 2 | Count 3 | MEAN |
|------------------|---------|---------|---------|------|
| 1 Harbour Street | 34      | 41      | 36      | 37   |
| 2 High Street    | 52      | 49      | 58      | 53   |
| 3 Oxford Street  | 68      | 74      | 71      | 71   |

### Noise survey

| Site | Decibels | What we could hear                                 |
|------|----------|----------------------------------------------------|
| 1    | 68 dBA   | Delivery van reversing, people talking, gulls.     |
| 2    | 65 dBA   | Steady traffic, shop doors. Constant but not loud. |
| 3    | 73 dBA   | Constant traffic, bus idling, a lorry braking.     |

| Site 1 Harbour Street                                                               | Site 3 Oxford Street                                                                 |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
|  |  |

#### What you saw, as well as what you measured

- Harbour Street is the narrowest of the three, and had by far the most pedestrians.
- Oxford Street is the widest and carries the B2205 through route.
- A trial one-way system was running on the High Street while we were there.

#### How this class data was collected

Two groups reached all three streets. The other three ran out of time and sampled three points along the High Street instead.

The figures above are pooled across the class, so Oxford Street rests on fewer counts. Use that when you evaluate.

## 2. Questionnaire results: all 25 responses

Stage 3

Five groups asked five people each, so the class collected 25 responses in total. These are the pooled results.

| Question                                                | How the 25 people answered                                      |
|---------------------------------------------------------|-----------------------------------------------------------------|
| 1 Do you live in Whitstable?                            | Yes 14    No 11                                                 |
| 2 If not, how far have you travelled?                   | <1 mile 1    1–2 miles 2    3–4 miles 4    >5 miles 4           |
| 3 How did you travel here today?                        | Car 12    Walk 5    Train 4    Bus 3    Cycle 1                 |
| 4 Is traffic a problem in Whitstable?                   | Yes 15    No 6    Not sure 4                                    |
| 5 If yes, what is the biggest problem?                  | Congestion 6    Parking 4    Safety 2    Pollution 2<br>Noise 1 |
| 6 Would you support a one-way system on Harbour Street? | Yes 13    No 7    Not sure 5                                    |

### Question 4 split by question 1

|                    | Yes | No | Not sure | Total |
|--------------------|-----|----|----------|-------|
| Live in Whitstable | 12  | 1  | 1        | 14    |
| Visitors           | 3   | 5  | 3        | 11    |
| TOTAL              | 15  | 6  | 4        | 25    |

#### This is the table that matters.

12 of the 14 residents said traffic is a problem. Only 3 of the 11 visitors did. Split the same question by who you asked and a clear pattern appears that the overall total hides.

### Work out the percentages. Which is the more useful figure, and why?

Residents saying yes: \_\_\_\_\_ %      Visitors saying yes: \_\_\_\_\_ %

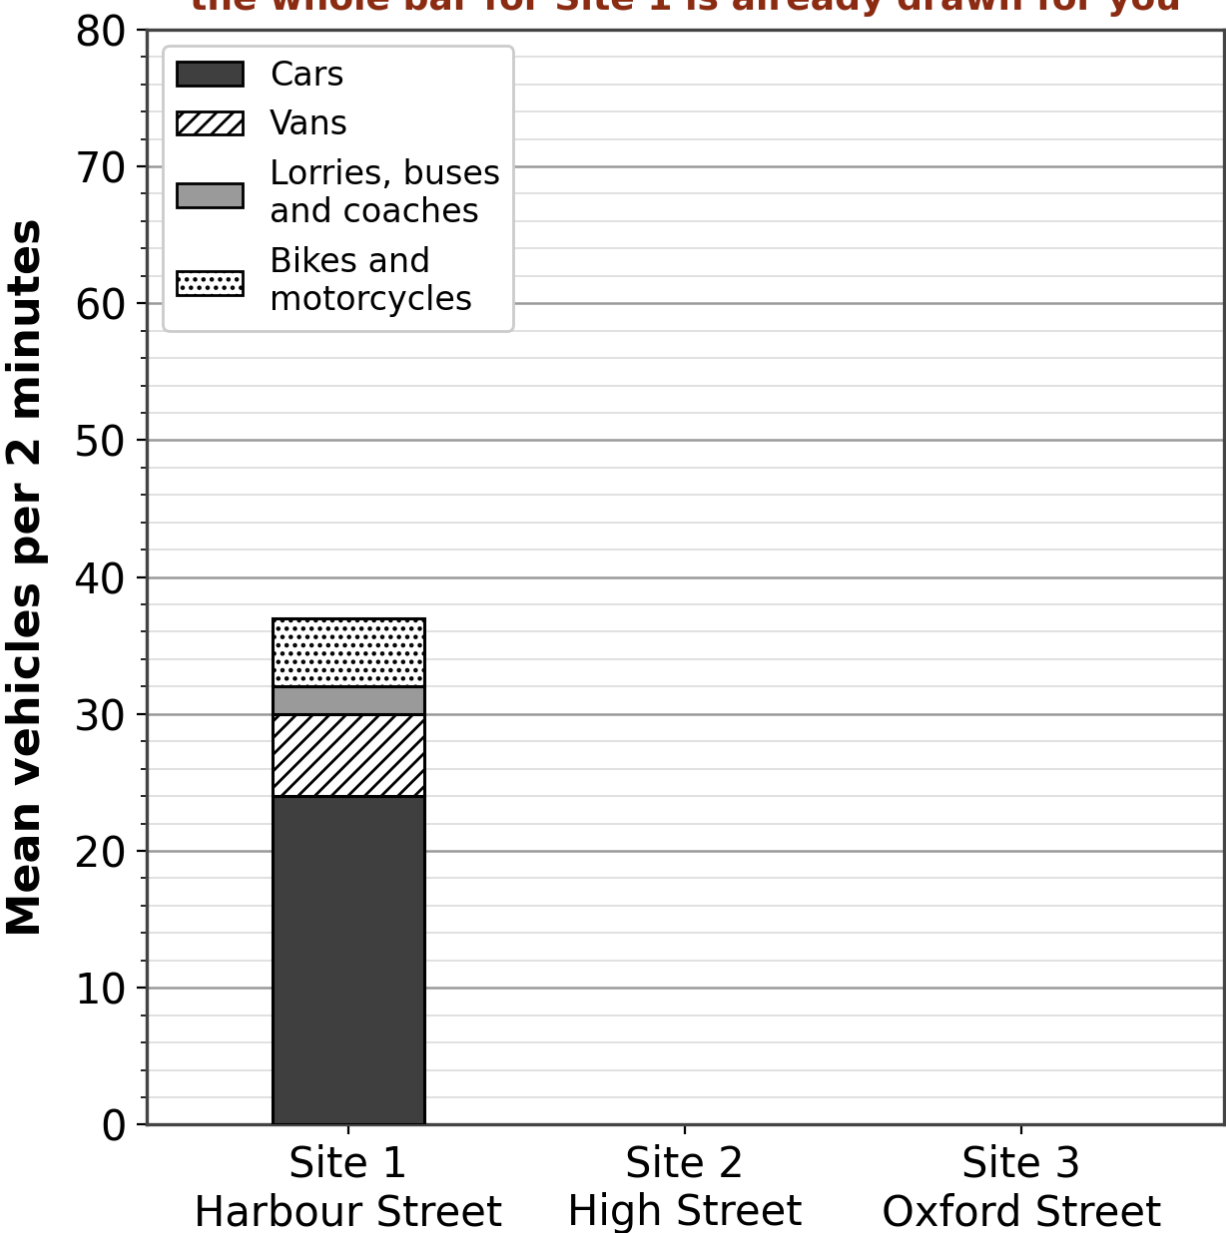

---

---

Traffic at each site, by vehicle type

the whole bar for Site 1 is already drawn for you

| Vehicle type | Cars | Vans | Lorries, buses and coaches | Bikes and motorcycles | TOTAL |
|--------------|------|------|----------------------------|-----------------------|-------|
| Site 1       | 24   | 6    | 2                          | 5                     | 37    |
| Site 2       | 35   | 8    | 5                          | 5                     | 53    |
| Site 3       | 44   | 11   | 11                         | 5                     | 71    |

**CHECKPOINT 1: familiar fieldwork**

Real OCR question

**For a human geography fieldwork investigation which you have completed, justify ONE technique you used to present your data. [2 marks]**

*OCR J384/02, June 2025, question 5(a). The same question appeared in 2023 and 2024 with different command words.*

**Success criteria, straight from OCR’s mark scheme**

| What earns the mark                             | Marks |
|-------------------------------------------------|-------|
| One valid point about why that technique worked | 1     |
| A second valid point about why it worked        | 1     |
| Naming the technique: NO CREDIT                 | 0     |

**OCR’s own example answer, and it is about a radar diagram**

*Using a radial graph let them compare the environmental quality results, although it was difficult to draw.*

**One mark for what it let them do. One for the drawback. The words “radial graph” earn nothing on their own.**

**Your turn. Pick Graph 1, 2 or 3 from this booklet.**

---

---

---

---

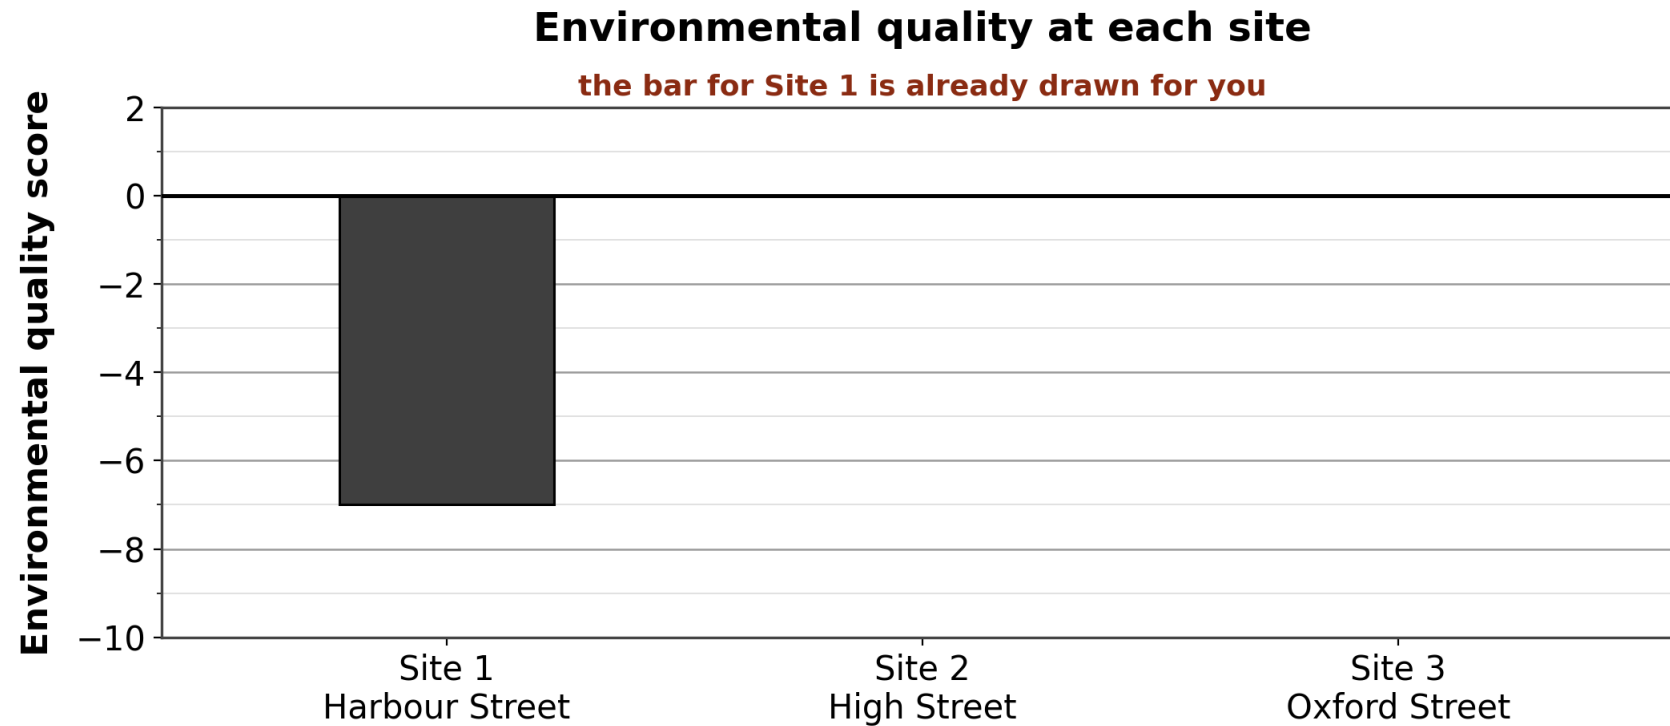

---

## Graph 2: environmental quality

Stage 3

The bar for Site 1 is drawn. Draw bars for Sites 2 and 3. All three scores are below zero, so all three bars hang down from the line.

| Site             | Traffic congestion | Greenery | Road quality | Parking | Pedestrian safety | Pollution | Traffic noise | Attractiveness | TOTAL |
|------------------|--------------------|----------|--------------|---------|-------------------|-----------|---------------|----------------|-------|
| 1 Harbour Street | -2                 | -1       | 0            | -2      | -2                | -1        | -1            | +2             | -7    |
| 2 High Street    | -1                 | 0        | +1           | -1      | 0                 | 0         | -1            | +1             | -1    |
| 3 Oxford Street  | -2                 | -1       | +1           | 0       | -1                | -2        | -2            | -1             | -8    |

Which site has the WORST environmental quality? Site \_\_\_\_\_

## CHECKPOINT 2: unfamiliar fieldwork

### Real OCR questions

#### The scenario

Students investigated the impact of an out-of-town shopping centre on a high street. You have never seen this investigation: it is UNFAMILIAR fieldwork. They visited on a Wednesday morning and took a photograph of the street.

OCR J384/02, June 2025, question 5(b).

A photograph like the one the students took. OCR's own figure is in the 2025 resource booklet.

**1. Suggest TWO ways they could use the photograph in their investigation. [2]**

**Mark scheme:** one mark each for HOW the photo could be used. Annotate it, add it to a map, compare it with one from another day, use it to count vehicles or shops, use it to do a quality survey.

**NO CREDIT for:** a land use survey, saying how busy it is, or describing what the photograph shows.

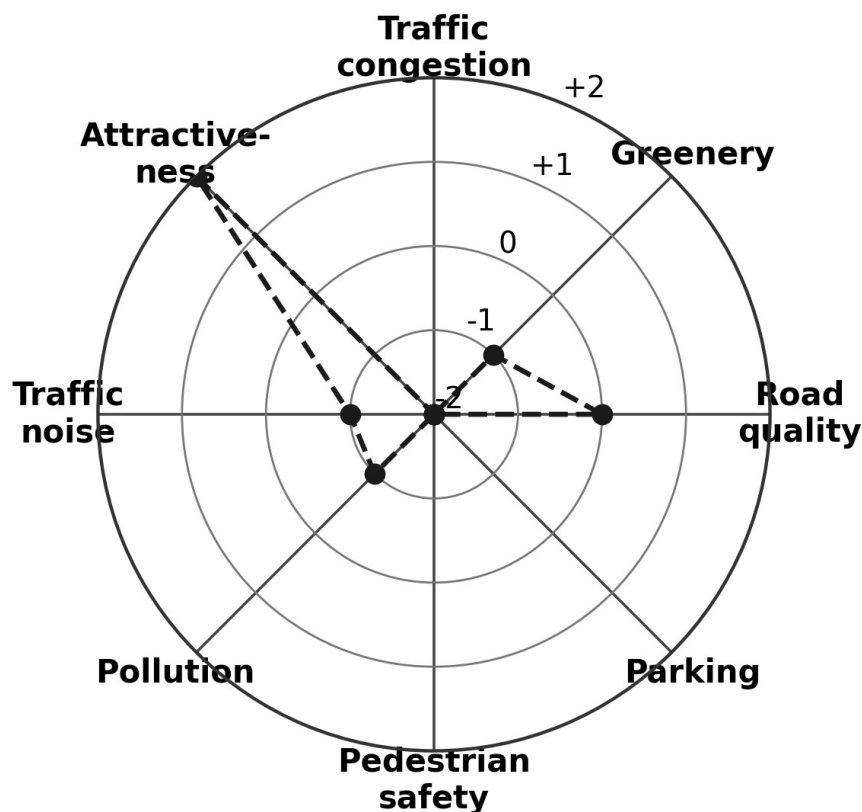

**2. Suggest a DIFFERENT fieldwork technique they could have used, and explain why it would be useful. [2]**

**Mark scheme:** one mark for naming the technique, one for why it is useful IN THIS study. Naming it alone gets one mark, not two.

## Graph 3: quality criterion by criterion

Add Site 3 in a solid line

**Site 1 (Harbour Street) is plotted for you, as a dashed line**

| Site         | Congestio<br>n | Greener<br>y | Roads | Parking | Safety | Pollution | Noise | Appeal | TOTAL |
|--------------|----------------|--------------|-------|---------|--------|-----------|-------|--------|-------|
| 1 Harbour St | -2             | -1           | 0     | -2      | -2     | -1        | -1    | +2     | -7    |
| 2 High St    | -1             | 0            | +1    | -1      | 0      | 0         | -1    | +1     | -1    |
| 3 Oxford St  | -2             | -1           | +1    | 0       | -1     | -2        | -2    | -1     | -8    |

Short column names only. The full criterion names are on the diagram above.

**Finished early? Add Site 2 in a third line style, and write a key.**

Fill every gap. All the numbers you need are in the box.

**Number bank. Careful: there are more numbers here than gaps.**

**37 44 53 71 2 7 11 -1 -5 -7 -8 Oxford Street Harbour Street High Street**

1. The site with the FEWEST vehicles was \_\_\_\_\_ , with a mean of \_\_\_\_\_ .
2. The site with the MOST vehicles was \_\_\_\_\_ , with a mean of \_\_\_\_\_ .
3. Lorries, buses and coaches rose from \_\_\_\_\_ at Site 1 to \_\_\_\_\_ at Site 3.
4. The WORST environmental quality score was \_\_\_\_\_ , at \_\_\_\_\_ .
5. The BEST environmental quality score was \_\_\_\_\_ , at \_\_\_\_\_ .
6. Now write the last sentence yourself. What does that tell you about using traffic counts alone?

**Now say it in one sentence, using two of those numbers.**

---

---

**Word bank. Careful: two of these words are not needed.**

**through traffic B2205 narrow wide pedestrians one-way  
congestion residents visitors perception subjective**

1. Oxford Street had the most vehicles because it carries the \_\_\_\_\_ route.
2. Much of that traffic is \_\_\_\_\_, which never stops in the town at all.
3. Harbour Street had far fewer vehicles but still scored badly, because it is very \_\_\_\_\_.
4. It also has the most \_\_\_\_\_, so people and vehicles are pushed close together.
5. Explain in your own words why traffic can feel worse where there is less of it.
6. The High Street scored BEST of the three, because a trial \_\_\_\_\_ system was running there.
7. 12 of the 14 \_\_\_\_\_ said traffic was a problem, but only 3 of the 11 \_\_\_\_\_ did.
8. This is a difference in \_\_\_\_\_, not in the traffic itself. Give one reason why that matters for our conclusion.

*Harbour Street: narrow, busy with people, and the fewest vehicles of the three.*

## **Harder: why did residents and visitors answer so differently?**

Tick the TWO reasons you think are right.

- ☐ Residents are there every day, so they notice the problem building up.
- ☐ Visitors were lying to us.
- ☐ Most visitors had arrived by car, so they are part of the traffic themselves.
- ☐ Visitors cannot see cars.

## CHECKPOINT 3: the 8-mark question

Real OCR question

**To what extent were the methods you used to collect your data effective? [8 marks + 3 SPaG]**

*OCR J384/02, June 2024, question 5(d). This is your homework. Plan it here.*

### Success criteria, straight from OCR's mark scheme

| Level          | What OCR says it must contain                                                                                                                  |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>3 (6–8)</b> | A thorough ANALYSIS of the methods you used, plus a thorough EVALUATION of them. Well-developed ideas, clear logical structure, substantiated. |
| <b>2 (3–5)</b> | A reasonable analysis and a reasonable evaluation. Developed ideas, some structure, supported by some evidence.                                |
| <b>1 (1–2)</b> | A basic analysis and a basic evaluation. Simple ideas, unstructured, limited evidence.                                                         |

#### Two rules OCR prints in bold, and both cost whole grades

- Just DESCRIBING the methods is capped at Level 1. Saying what you did is not evaluating it.
- **Writing about PHYSICAL fieldwork scores a maximum of 2 marks. One mention of the groynes and your 8 marks become 2.**

| What a Level 3 answer actually does | Real OCR exemplar |
|-------------------------------------|-------------------|
|-------------------------------------|-------------------|

## Real OCR exemplar

Their example is about a questionnaire. Four moves, in this order.

|   | Move                               | In OCR's example                                                 |
|---|------------------------------------|------------------------------------------------------------------|
| 1 | Says what they did                 | we ran a questionnaire about the redevelopment                   |
| 2 | Gives the problem WITH A NUMBER    | it rained, so only 6 people answered: too small to be reliable   |
| 3 | Admits a second, harder problem    | they only approached elderly people, so not a fair cross section |
| 4 | Says what would have worked better | go at the weekend, work in pairs, get a much wider sample        |

**Notice move 2.** The number is what turns a complaint into an evaluation. “Not many people” is Level 1. “Only 6 people, too small to be reliable” is Level 3.

## Plan yours. Two methods, four moves each.

[illegible]

## Homework part 1: your conclusion

Stage 5

Write the five sentences below straight out, filling the gaps. That is your conclusion.

**Careful:** “to what extent” does not want yes or no. It wants a judgement: a problem in some places and for some people, but not everywhere and not for everyone.

|   | Write this sentence                                                                                          |
|---|--------------------------------------------------------------------------------------------------------------|
| 1 | Traffic _____ (is / is not) a problem in Whitstable, but only in some places.                                |
| 2 | It is worst at _____ , where we counted a mean of _____ vehicles in two minutes.                             |
| 3 | A second piece of evidence is the quality survey: _____ scored _____ , the lowest of the three sites.        |
| 4 | However, traffic is NOT a problem everywhere: _____ scored only -1, where a trial _____ system was in place. |
| 5 | My first hypothesis was _____ (accepted / rejected) and my second was _____ (accepted / rejected).           |

---

---

---

---

---

---

---

---

---

---

## Homework part 2: your evaluation

Stage 6

**To what extent were the methods you used to collect your data effective? [8 marks + 3 SPaG]**

Write TWO paragraphs, one for each method below. Each paragraph uses the same four sentence starters.

| Method 1          | Method 2          |
|-------------------|-------------------|
| The traffic count | The questionnaire |

|   | Sentence                    | Start it like this                                                                   |
|---|-----------------------------|--------------------------------------------------------------------------------------|
| 1 | What I did                  | "We tallied vehicles by type in three two minute counts on Harbour Street at 1pm..." |
| 2 | What went wrong             | "This was not fully reliable because..."                                             |
| 3 | What I would change         | "Next time I would... which would make the results more..."                          |
| 4 | What that does to my answer | "This means my judgement is still / is not safe because..."                          |

### Things that actually went wrong on the day. Use any of these.

- Only two groups reached all three streets, so Oxford Street rests on fewer counts.
- Each count lasted only two minutes.
- We sampled one afternoon, out of season.
- 15 of the 25 responses came from the High Street, so the sample is not evenly spread.
- The quality survey scores were our own opinions.

**OCR's mark scheme caps physical geography fieldwork at 2 marks on this question. Write about the groynes and you lose six marks outright.**

**To what extent were the methods you used to collect your data effective? [8 + 3 SPaG]**

*Two paragraphs: one on the traffic count, one on the questionnaire. Four sentences in each.*

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
